Imperial Updates Mineral Reserve and Mineral Resource Estimates for Mount Polley and Huckleberry

Vancouver - March 31, 2008 - Imperial Metals Corporation (III-TSX) has updated the mineral reserve and mineral resource estimates for the Mount Polley and Huckleberry mines.

Mount Polley Updated Mineral Reserve and Mineral Resource Estimate

The reserve and resource estimate for Mount Polley has been updated as of January 1, 2008. The current estimate incorporates open pit mining of the Southeast Zone, C2 Zone and the Springer Zone, in addition to the current Wight and Bell pits, and reflects twelve months of mine production since the January 1, 2007 estimate.

As of January 1, 2008 total Mount Polley reserves are 55.6 million tonnes of 0.36% copper, 0.30 g/t gold and 0.66 g/t silver, compared to 59.9 million tonnes of 0.36% copper, 0.27 g/t gold and 0.73 g/t silver at January 1, 2007. Exploration replaced 2.2 million tonnes of the 6.4 million tonnes mined in 2007. The current mine life for Mount Polley is to the fourth quarter of 2015. Drilling continues to expand the resources on the site, with 104 million tonnes of mineral resources identified in addition to the reserves.

Mount Polley Mine Proven and Probable Reserves

Zone/Pit	Tonnes Ore	Grade			Contained Metal			Stripping Ratio
		Copper %	Gold g/t	Silver g/t	Copper (lb) 000,000's	Gold (oz) 000's	Silver (oz) 000's	
Wight	2,526,502	0.957	0.307	6.166	53.30	24.94	500.86	1.39
Bell	1,674,934	0.386	0.445	-	14.25	23.96	-	1.01
Springer	44,499,296	0.339	0.277	0.421	332.57	396.30	602.32	3.19
C2	4,544,770	0.246	0.364	-	24.65	53.19	-	2.77
Southeast	2,315,221	0.248	0.458	1.046	12.66	34.09	77.86	1.12
Total	55,560,723	0.357	0.298	0.661	437.44	532.48	1,181.04	

Reserve Calculation Parameters

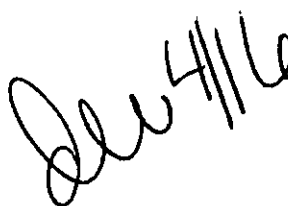

The parameters used in this updated resource are based on updated pit designs and the current Mount Polley production schedule. The ultimate pit designs were based on US\$1.80 copper, US\$750.00 gold, US\$10.00 silver and \$1.176 CDN/US exchange rate.

The economic mineral reserves and resources at Mount Polley mine were calculated as follows:

- A 3D block model was constructed using Minesight Mining Software.
- The property was zoned based on geological zones, the blocks and drill holes were then coded to reflect the zones.
- The drill holes were composited to 5 metre down the hole composites.
- Mineralized zones were identified within the geological zones, by kriging an indicator to identify the blocks that have a high probability of having greater than a 0.15% copper grade.
- The drill hole composites were then coded to match the indicator codes in the block model.

FINANCIAL

**Imperial
Metals**

- Outlier grades were capped, and variograms for Cu, Au, Ag and Fe in each zone were generated.
- Grades were kriged into the block model, using zone and indicator matching.
- An oxide ratio number for each block was interpolated using an ID3 method, with zone and indicator matching. The oxide ratio number is used in the mill recovery formula.
- The mill recoverable grades were calculated using formulas based on historic recoveries as well as on and off site metallurgical test work.
- A dollar value was calculated for each block based on the metals prices, US/Can Exchange Rate, and mining, shipping and smelting costs.
- Lerchs-Grossman pit optimization software was used to identify economic pit shell based on the above economic parameters. Pit designs were created using the economic pit shells and design parameters from Golder Geotechnical Consultants of Vancouver.

C2	EqCu% = Copper + Gold / 1.27
Southeast	EqCu% = Copper + Gold / 1.44 + Silver / 116

¹ Northeast Zone contains the Wight Pit

Resource values were identified by summing all blocks that fall outside of the economic pit and having a block grade greater than 0.30 copper equivalent. The copper equivalent was calculated using relative recovery and metal price for copper, gold and silver. The resources were classified as inferred, indicated and measured based on the following three items; minimum number of drill holes used in the estimate, minimum number of composites, and the maximum distance to the nearest composite.

Resource Calculation Parameters			
Resource Classification	Min. # of Holes used for Estimate	Min. # of Composites	Max. Distance to Nearest Composite
Inferred	1	3.000	60m
Indicated	2	3.000	50m
Measured	3	5.000	25m

The ore reserves and resources were calculated and verified by Art Frye, Manager of Mining, Mount Polley Mining Corporation and Greg Gillstrom, P. Eng., Geological Engineer, the designated Qualified Person as defined by National Instrument 43-101.

Huckleberry Updated Mineral Reserve and Mineral Resource Estimate

On December 31, 2007 the mineral reserve of the Main Zone Extension pit was calculated at a cut-off grade of 0.200%. Probable reserves at December 31, 2007 were prepared under the supervision of Kent Christensen, P.Eng., Huckleberry Mine Chief Mine Engineer, designated as the Qualified Person for this purpose.

Huckleberry Mine Proven and Probable Reserves				
	Ore (tonnes)	Copper (%)	Moly (%)	Strip Ratio
Main Zone Extension	16,560,000	0.352	0.005	0.81:1

Prices used in the calculation of the Huckleberry reserves were US\$1.63/lb copper, US\$550.00/oz gold, US\$8.50/oz silver, US\$7.50/lb molybdenum and an exchange rate of \$1.15 CDN/US.

Inferred	28,087,571	0.534	0.295	0.304	0.194	182.86	274.21	175.06

n/a* silver assay values only available in the Northeast, Boundary and Southeast zones

¹ "Proven and Probable Reserves" are not included in these resource values

Copper Equivalent Calculation by Zone [resource values based on 0.3 Copper Equivalent Cut-Off]	
Northeast ¹	EqCu% = Copper + Gold / 1.44 + Silver / 116
Bell	EqCu% = Copper + Gold / 1.27
Springer	EqCu% = Copper + Gold / 1.27
C2	EqCu% = Copper + Gold / 1.27
Southeast	EqCu% = Copper + Gold / 1.44 + Silver / 116

¹ Northeast Zone contains the Wight Pit

Resource values were identified by summing all blocks that fall outside of the economic pit and having a block grade greater than 0.30 copper equivalent. The copper equivalent was calculated using relative recovery and metal price for copper, gold and silver. The resources were classified as inferred, indicated and measured based on the following three items; minimum number of drill holes used in the estimate, minimum number of composites, and the maximum distance to the nearest composite.

Resource Calculation Parameters			
Resource Classification	Min. # of Holes used for Estimate	Min. # of Composites	Max. Distance to Nearest Composite
Inferred	1	3.000	60m
Indicated	2	3.000	50m
Measured	3	5.000	25m

The ore reserves and resources were calculated and verified by Art Frye, Manager of Mining, Mount Polley Mining Corporation and Greg Gillstrom, P. Eng., Geological Engineer, the designated Qualified Person as defined by National Instrument 43-101.

Huckleberry Updated Mineral Reserve and Mineral Resource Estimate

On December 31, 2007 the mineral reserve of the Main Zone Extension pit was calculated at a cut-off grade of 0.200%. Probable reserves at December 31, 2007 were prepared under the supervision of Kent Christensen, P.Eng., Huckleberry Mine Chief Mine Engineer, designated as the Qualified Person for this purpose.

Huckleberry Mine Proven and Probable Reserves				
	Ore (tonnes)	Copper (%)	Moly (%)	Strip Ratio
Main Zone Extension	16,560,000	0.352	0.005	0.81:1

Prices used in the calculation of the Huckleberry reserves were US\$1.63/lb copper, US\$550.00/oz gold, US\$8.50/oz silver, US\$7.50/lb molybdenum and an exchange rate of \$1.15 CDN/US.
